MLOps. Software best practices for building Machine Learning solutions

22/4/2020
10:00 (GMT+02)
Length: 30 min

**plain
concepts**

Rediscover
the meaning of technology

Rediscover
the meaning of technology

Founded in 2006 by 4 Microsoft MVPs, Plain Concepts was created to help companies adopt new technologies aimed at improving their productivity and processes.

Awarded in 2016 as **Microsoft Partner of the Year**, we currently have over **350 employees**, reaching a milestone in the technology sector by having **12 professionals** recognized as **Microsoft MVP** and over a dozen certifications at business level.

Present in **Spain, USA, UAE, United Kingdom, Germany and the Netherlands**, we have developed over 2,000 projects for companies across all industrial vertical.

MICROSOFT GOLDEN PROVIDER

- Application Development
Cloud Platform
- Cloud Productivity
Collaboration and
Content Datacenter
- DevOps

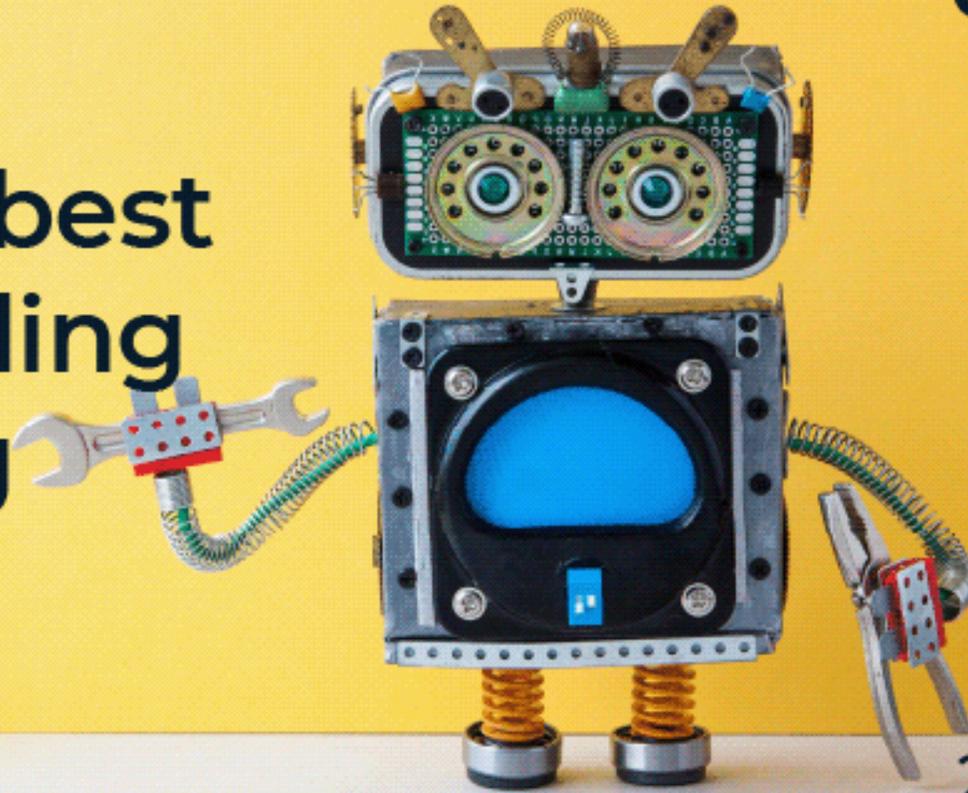

MICROSOFT SILVER PROVIDER

- Application
Integration
Data Analytics
- Data Platform
Messaging
- Small and Midmarket
Cloud Solutions
- Windows and Devices

Virtual Coffee

MLOps. Software best practices for building Machine Learning solutions

22/4/2020
10:00 (GMT+02)
Length: 30 min

Agenda

1. Machine Learning is hard
2. MLOps **Components**
3. MLOps **Teams and Processes**
4. MLOps **Flows**

QUICK POLL

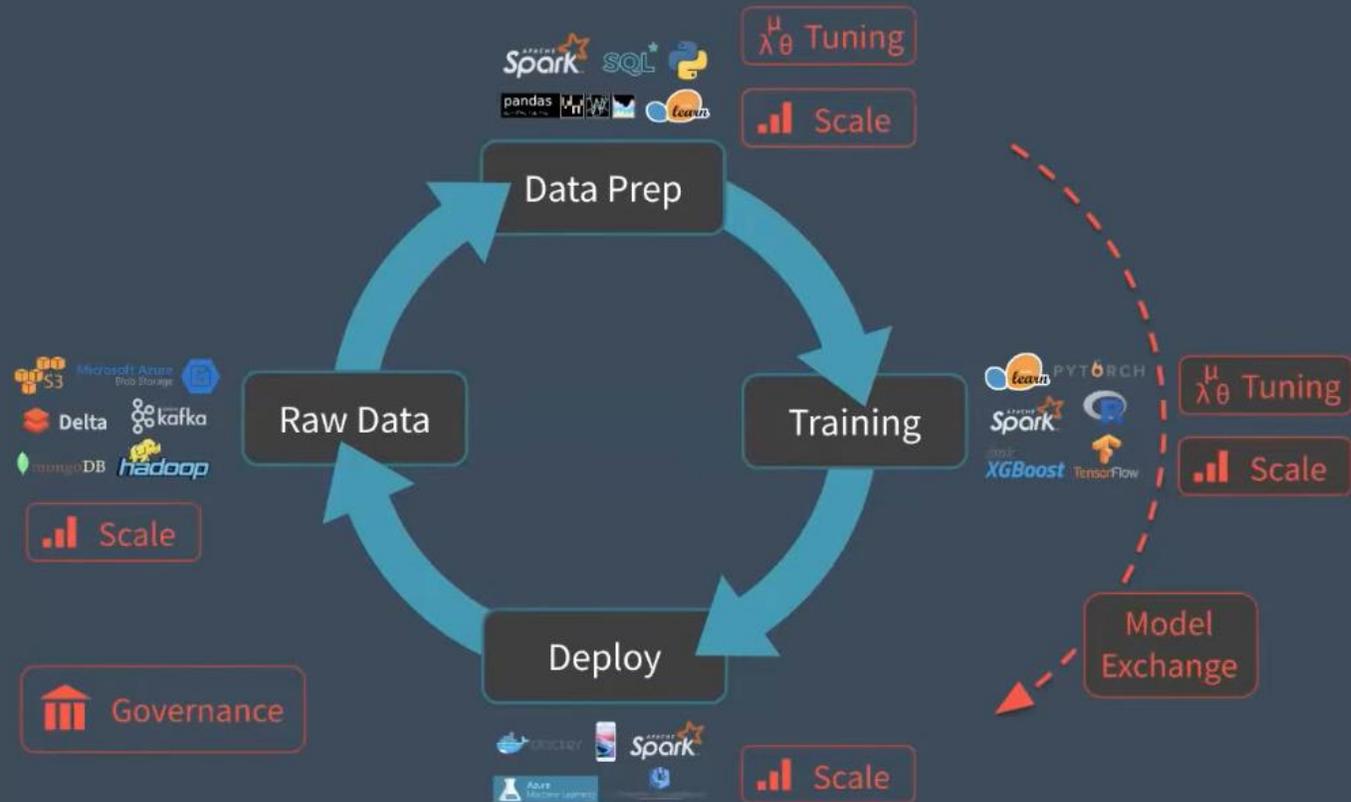

Did you have problems deploying your latest
model to production?

YES

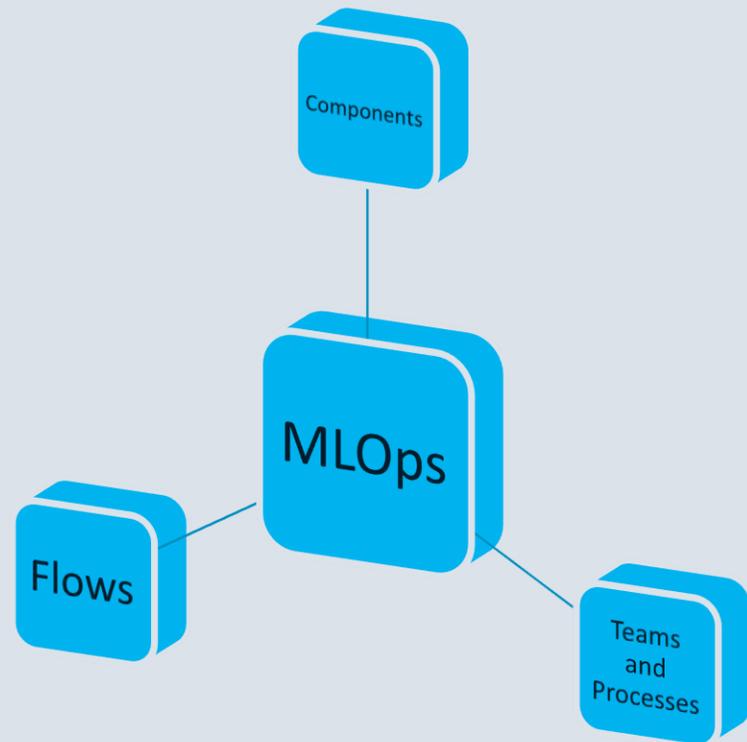

NO

If **YES** - What problems?

Machine Learning lifecycle

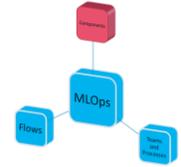

Machine Learning **best practices**

“

MLOps is a new practice for collaboration and communication between data scientists and IT professionals while **automating and productizing** machine learning algorithms

”

MLOps Components

SOURCE CONTROL

ML LIFECYCLE

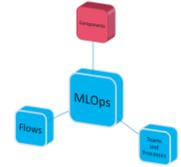

CI/CD PLATFORM

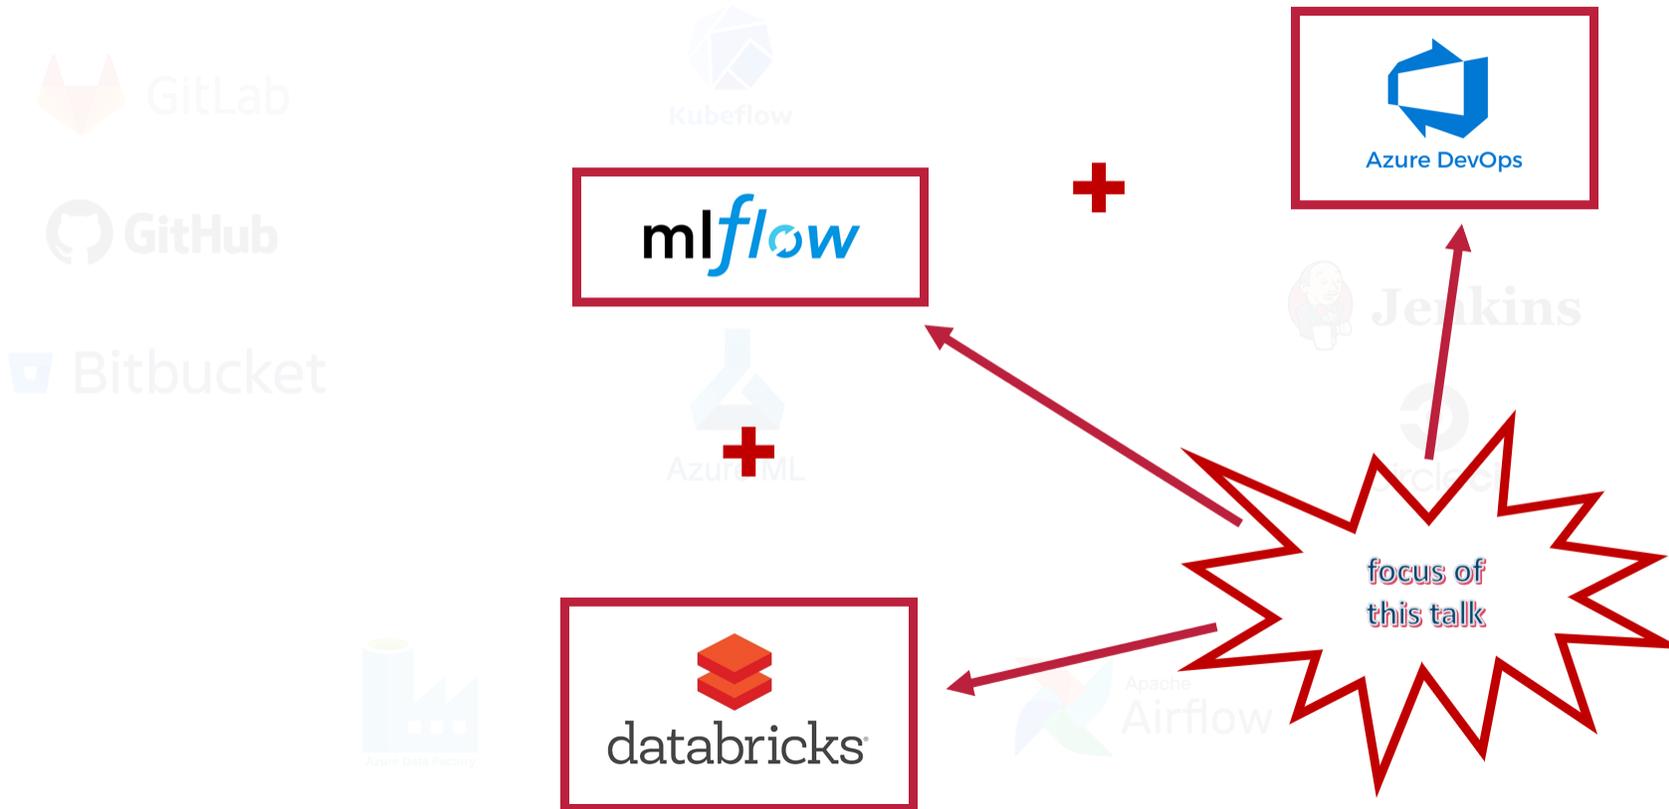

EXECUTION PLATFORM

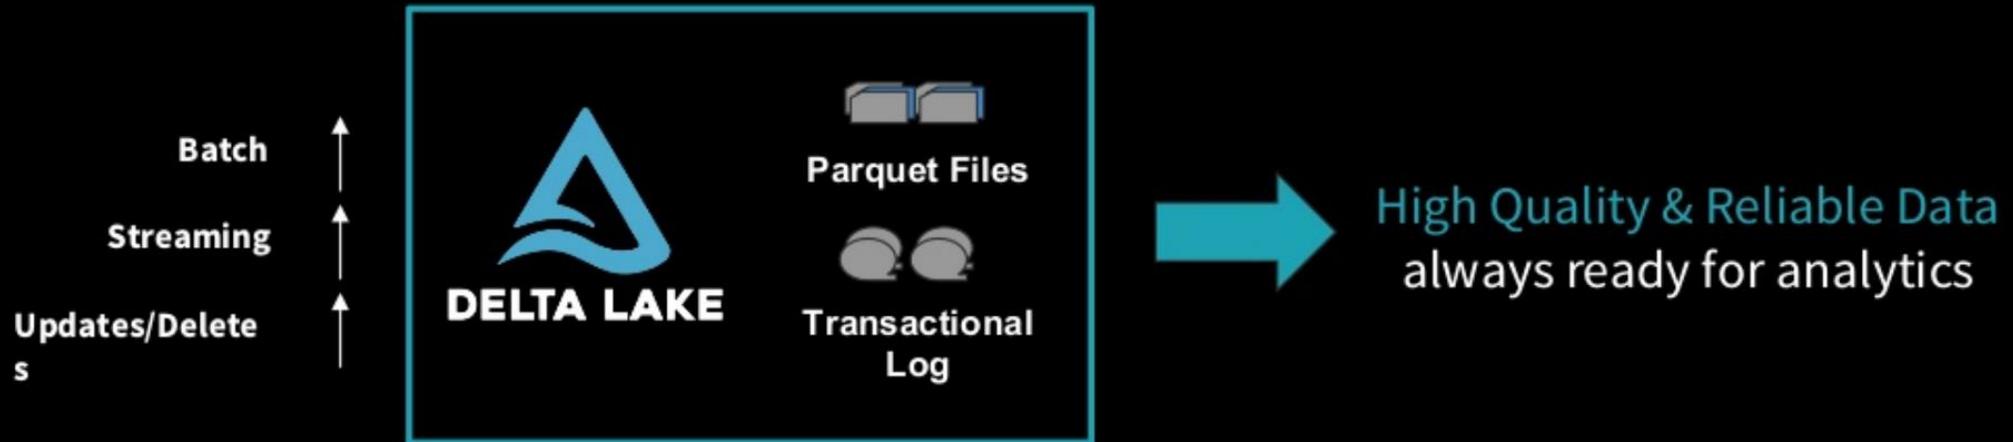

MLOps Components

Delta Lake ensures data reliability

Key Features

- ACID Transactions
- Schema Enforcement
- Unified Batch & Streaming
- Time Travel/Data Snapshots

Azure Boards

Agile planning tools

Track work with configurable Kanban boards, interactive backlogs, and powerful planning tools. Unparalleled traceability and reporting make Boards the perfect home for all your ideas—big and small.

Azure Repos

Unlimited free private repos

Get flexible, powerful Git hosting with effective code reviews and unlimited free repositories for all your ideas—from a one-person project to the world's largest repository.

Azure Artifacts

Universal package repository

Share Maven, npm, NuGet, and Python packages from public and private sources with your entire team. Integrate package sharing into your CI/CD pipelines in a way that's simple and scalable.

Azure Pipelines

CI/CD for any platform

Build, test, and deploy in any language, to any cloud—or on-premises. Run in parallel on Linux, macOS, and Windows, and deploy containers to individual hosts or [Kubernetes](#).

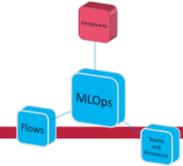

Azure Test Plans

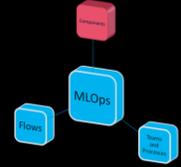

Manual and exploratory testing

Test often and release with confidence. Improve your overall code quality with manual and exploratory testing tools for your apps.

focus of
this talk

<https://azure.com/devops>

mlflow

Open source machine learning platform

- Works with any ML library, algorithm, language, etc
- *Open interface* design (use with any code you already have)

mlflow Tracking

Record and query
experiments: code,
data, confs, results

mlflow Projects

Packaging format
for reproducible
runs and workflows

mlflow Models

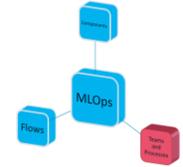

General format
that standardizes
deployment paths

new

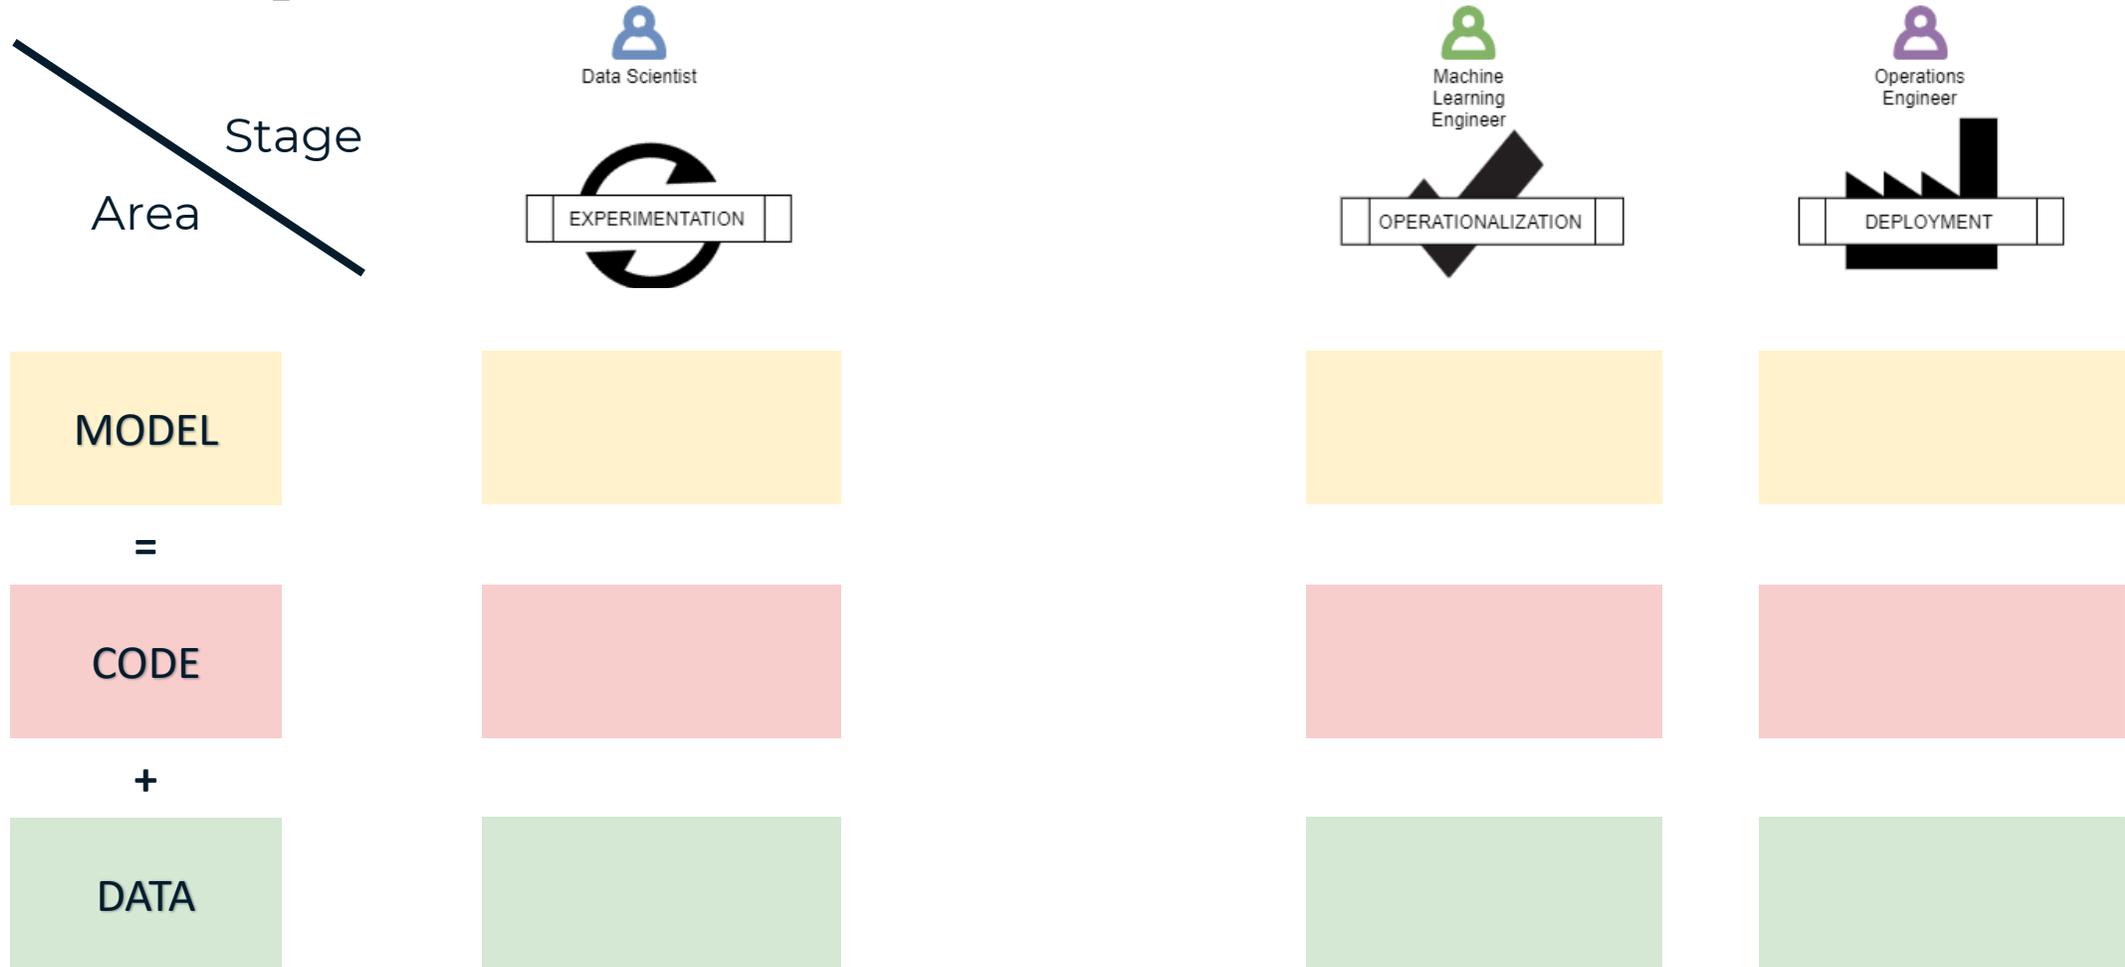

mlflow Model Registry

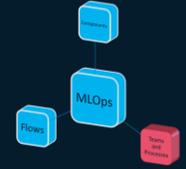

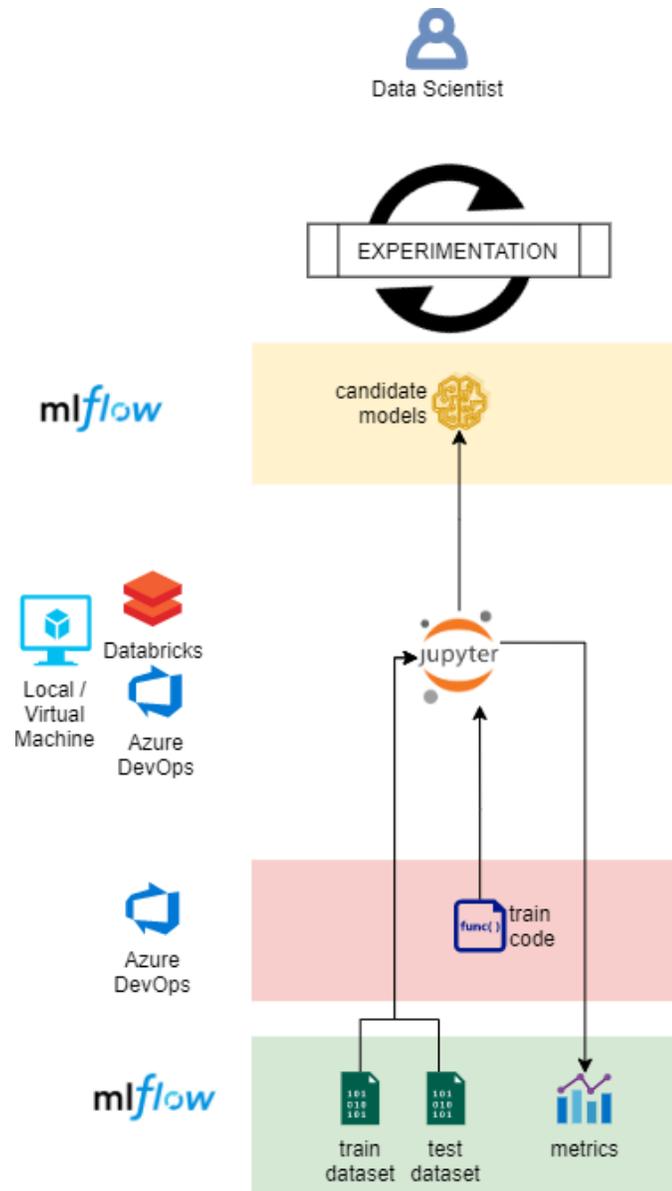

Centralized model
management,
review & sharing

<https://mlflow.org/>

MLOps Teams and Processes

EXPERIMENTATION

Model Selection (mlFlow Models)

EDA (Exploratory Data Analysis)

Preprocessing

- Data Collection
- Feature Engineering

Train Model

- Hyperparameter tuning

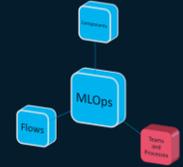

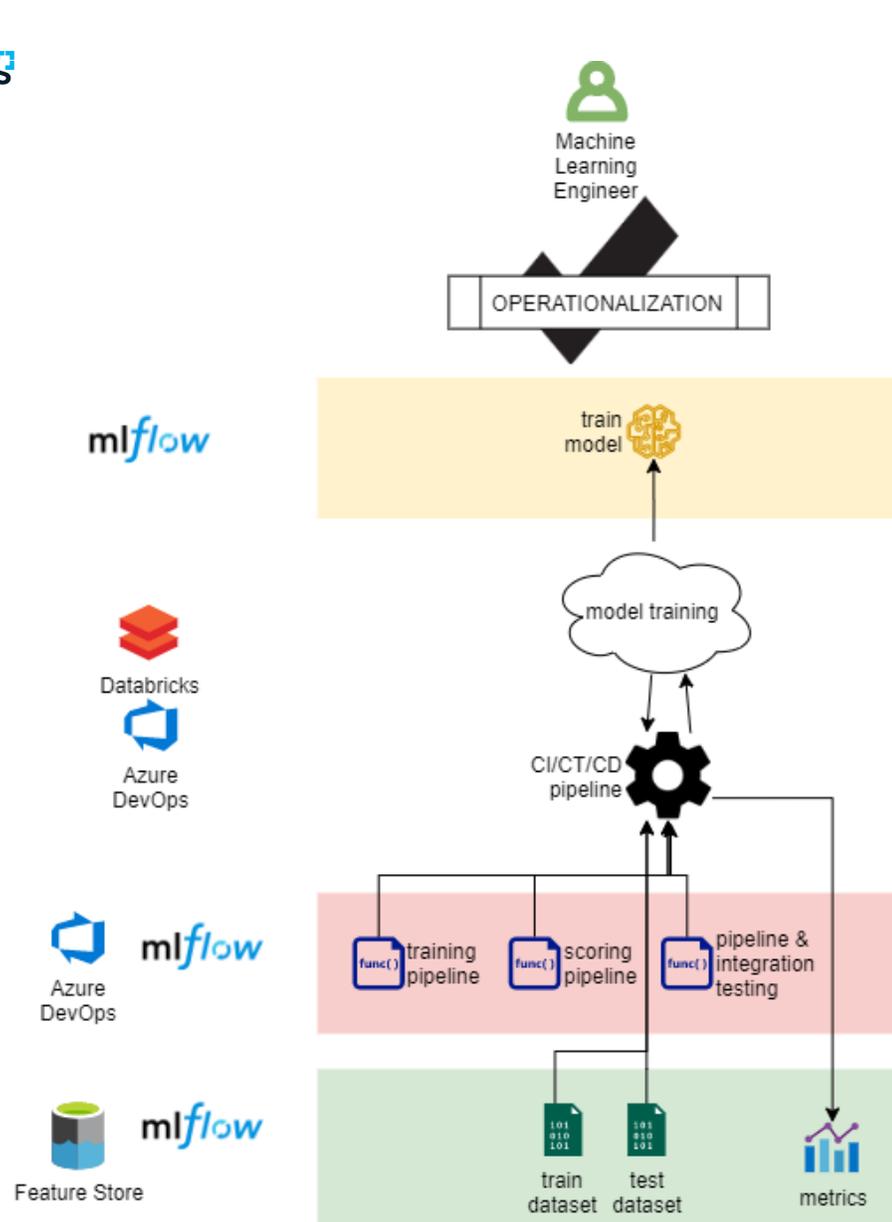

Evaluate Model

Feature branches

Notebooks (w/out Spaghetti code)

Dataset samples

Model Hyperparameters (mlFlow Tracking)

OPERATIONALIZATION

Model Store (mlFlow Models)

DevOps Pipelines:

- Build
- Release

Simple Orchestration:

- code
- gated releases

Infrastructure deployment

Code versioning

- Git flows
- mlFlow project

ML Pipelines (train and scoring)

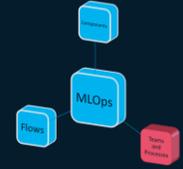

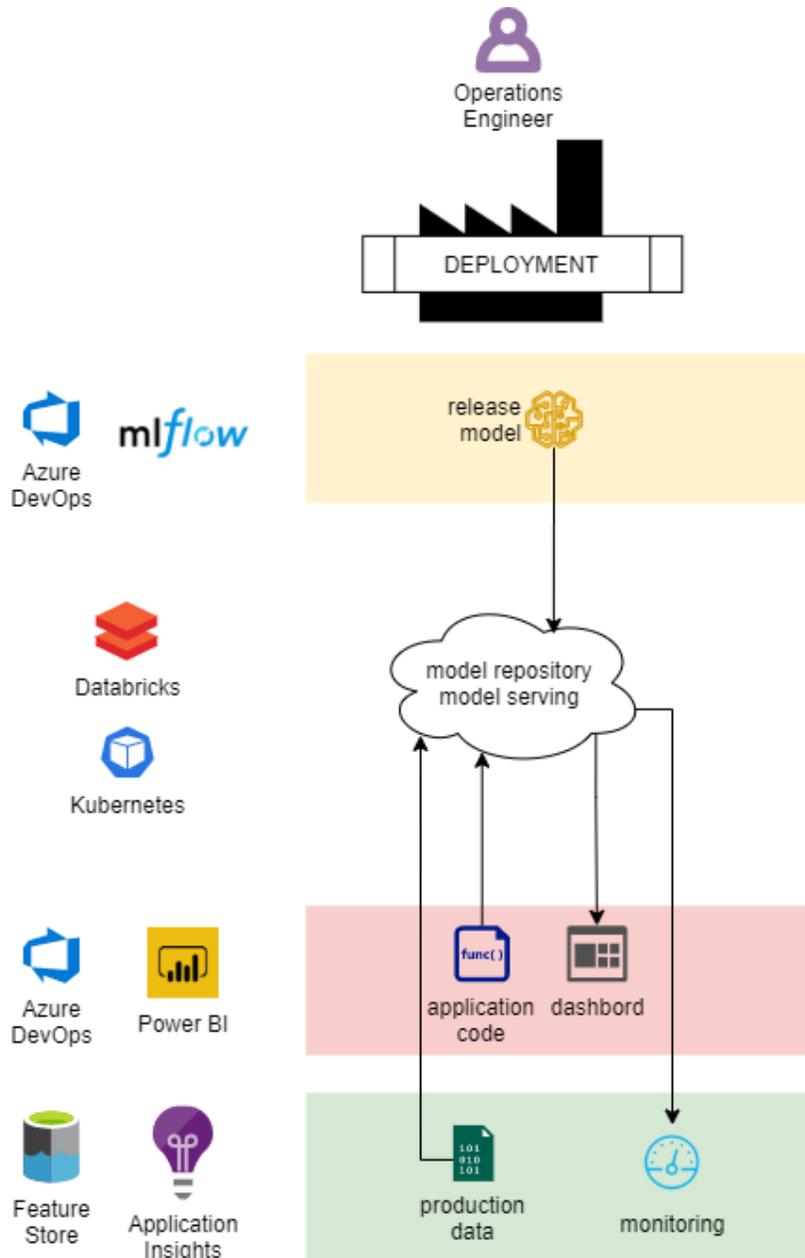

Unit and Integration testing

Train and Testing Dataset

Feature Store (data lineage)

Data Pipelines integration

Model evaluation (mlFlow tracking)

DEPLOYMENT

Model Registry (mlFlow Model Registry)

Model deployment:

- Single / Multiple model (partitioned models)
- Shadow model (canary deployment)
- Competing models (A/B testing)

Model serving:

- Embedded model (model + code)
- Model as a Service (REST API)
- Model as artifact (deployment by label)

Scalability:

- Kubernetes
- Databricks

Scoring:

- Batch (offline)
- Single Request (online)

Visualization

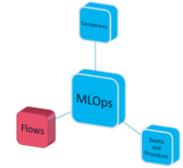

API's

Analytics

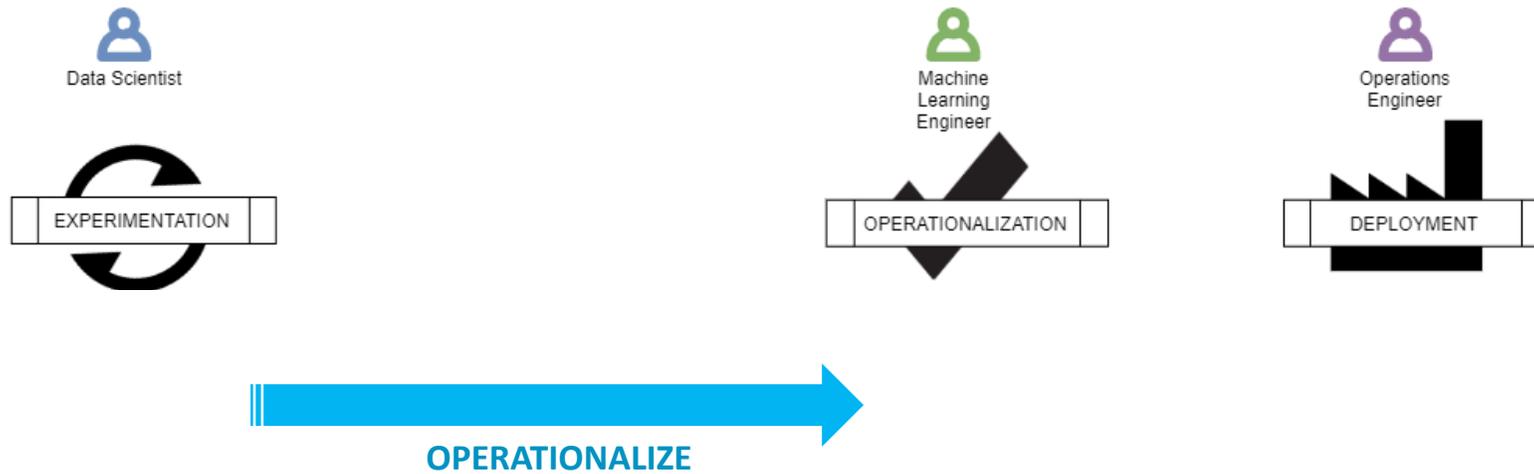

Production Data (w/out past data)

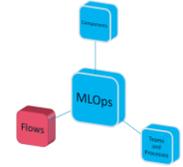

Monitoring:

- Concept drift
- Data drift

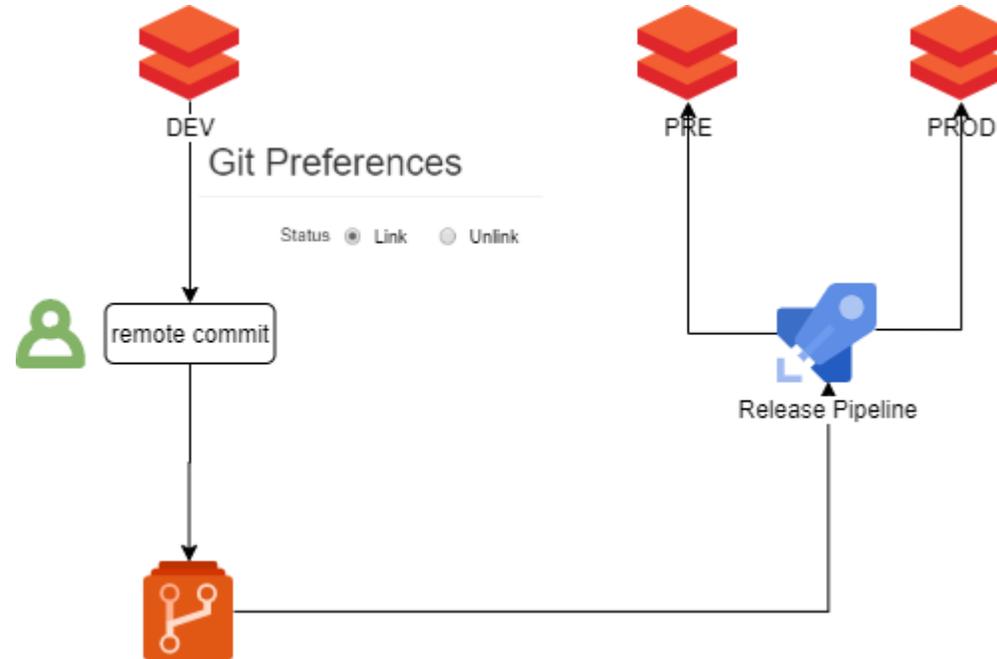

MLOps Flows

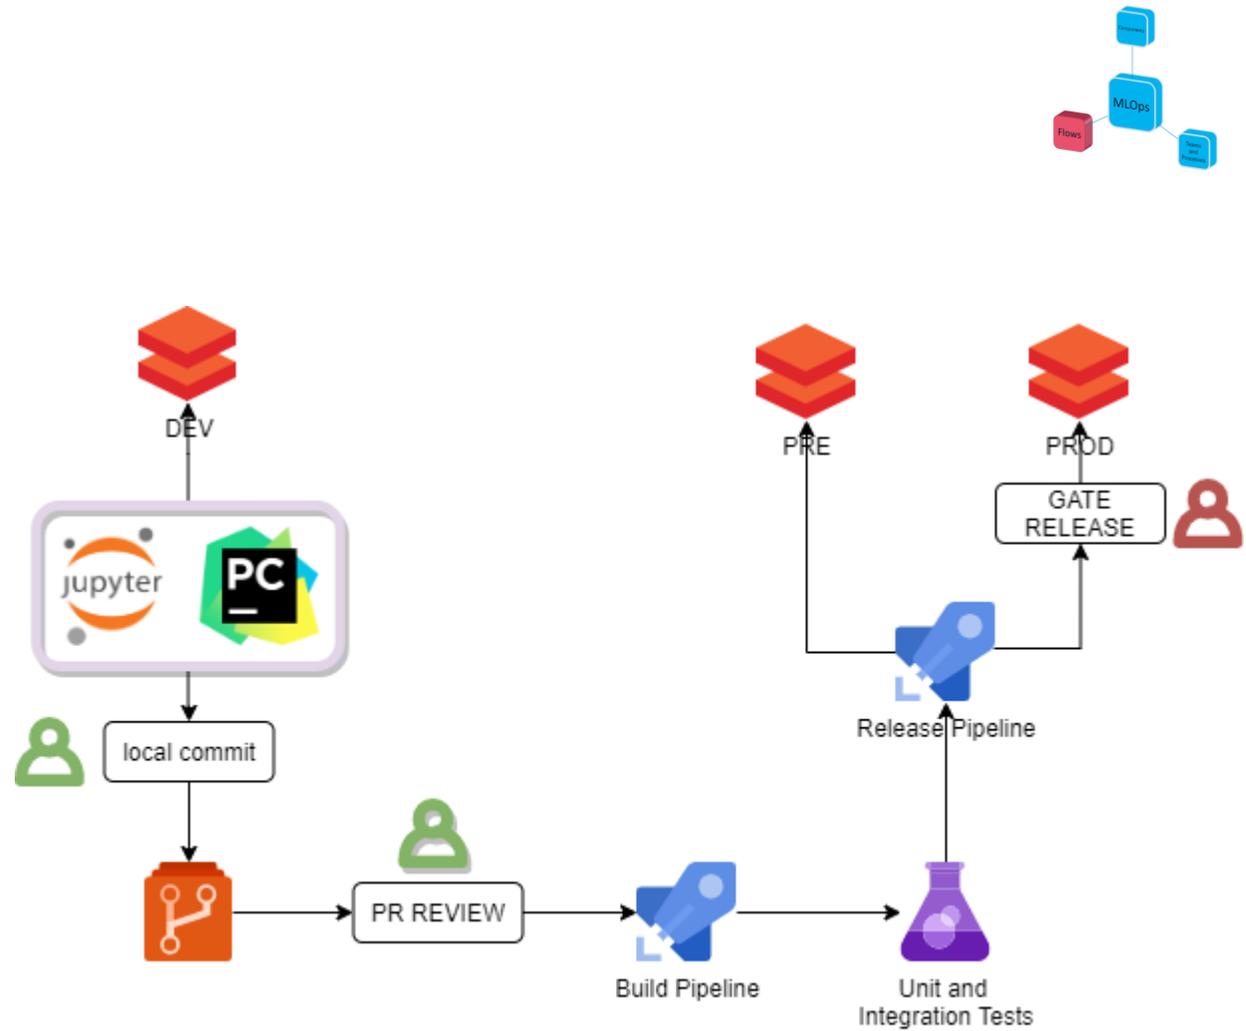

Databricks Development

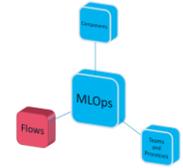

Databricks based development

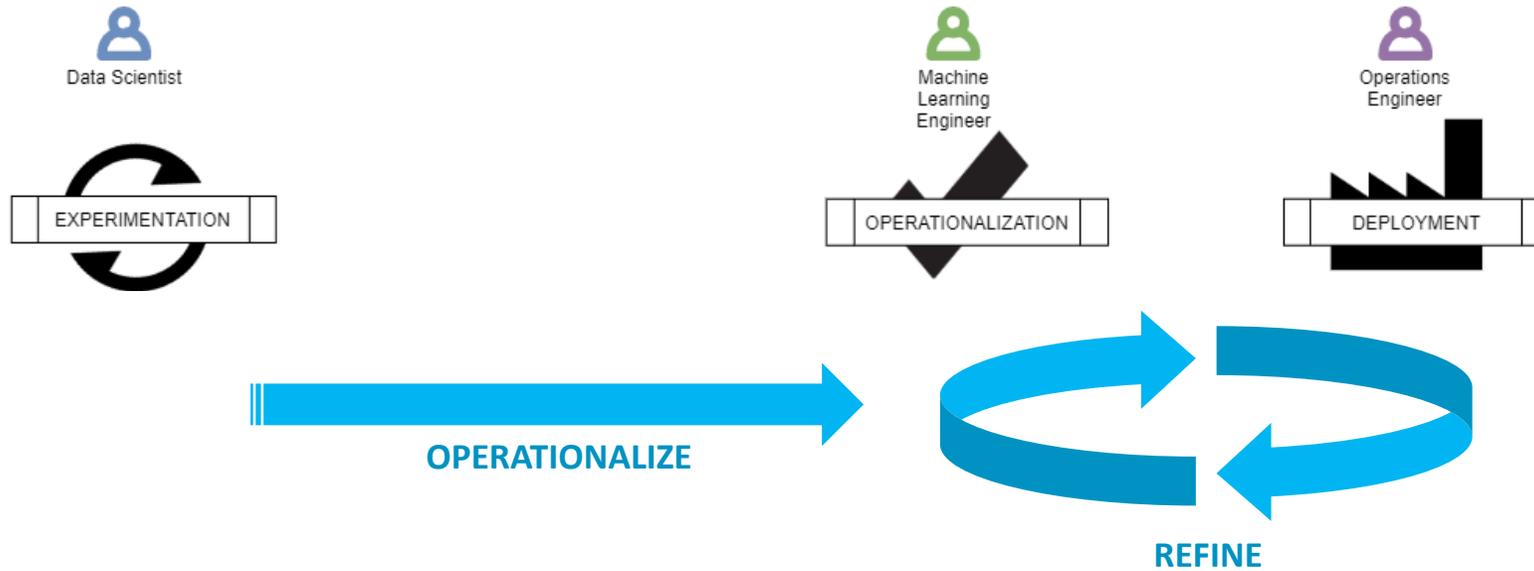

Databricks Development

Mixed based development

MLOps Flows

Virtual Coffee

Optimización de modelos de Deep Learning: Mejora la eficiencia y el rendimiento de tus predicciones

22/04/2020
